C10490	DR. ABHIJIT MAGAN MORE	36	M	25.06.2020	Positive	OBSERVED CT VALUE IS 33.55. A CT VALUE OF MORE THAN 24 CYCLES IN A FOLLOW UP PATIENT IS NON-INFECTIOUS, INDICATING SHEDDING OF DEAD VIRUS. A RECENT STUDY PUBLISHING EMERGING INFECTIOUS DISEASE STATES THAT IN FEW PATIENTS PCR RESULT CAN BE POSITIVE UPTO TWO MONTHS FROM THE ONSET OF SYMPTOMS.

Note: The results relate only to the specimens tested and should be correlated with clinical findings.
Interpretation guidance:-

- Testing of referred clinical specimens was considered on the basis of request / referral received from / through State Surveillance Officer (SSO) of concerned State Integrated Disease Surveillance Programme (IDSP)/any other health care facility affirming requirements of the case definition/s.
- A positive test result is only tentative, and will be reconfirmed by retesting.
- Repeat sampling and testing of lower respiratory specimen is strongly recommended in severe or progressive disease.
- The repeat specimens may be considered after a gap of 2 – 4 days after the collection of the first specimen for additional testing if required.*
- A positive alternate pathogen does not necessarily rule out either, as little is yet known about the role of coinfections.
- Please note that these results are not to be used for any thesis or presentations or for Publication in any Journal without the prior permission of the Director General, ICMR
